

LH HYALURONIC SERUM

The moisturizing benefits of Hyaluronic acid are well known. As a natural compound found throughout the body, its character and compatibility with the skin are unparalleled. It is one of nature's great moisturizers.

Hyaluronic acid takes in moisture from the surrounding air and uses it in various ways to protect and keep the skin well hydrated. By keeping the skin moisturized, it facilitates a healthy environment in which to naturally repair and regenerate damaged skin cells.

SST's SKIN LH Hyaluronic Serum combines two Hyaluronic molecules with different molecular weights Hyaluronic Acid: Low & High (LH) into one intense moisturizing serum that utilizes the unique characteristics and benefits of these two types of Hyaluronic Acid.

benefits

- Replenishes the skin's Hyaluronan levels
- Helps restore critical moisture balance
- Reinforces the skin's natural cell proliferation
- Helps protect the skin from harmful environmental agents
- Softens and smoothes for a healthier appearance

daily application

Morning and Evening

directions

Apply to skin in a thin layer and allow to dry.

ingredients

Purified Water (Aqua), Hyaluronic Acid High Molecular Weight, Hyaluronic Acid Low Molecular Weight, Phenoxyethanol, Ethylhexylglycerin.

how it works

Hyaluronic Acid, also known as Hyaluronan, greatly contributes to tissue hydrodynamics and the proliferation of skin cells. It naturally imbibes water molecules from the surrounding atmosphere, which improves the moisturization of the skin and resilience of skin tissue.

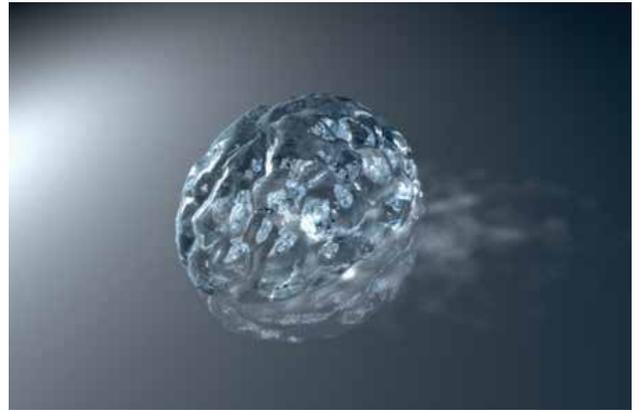

As a natural component of the molecular structure of the skin, Hyaluronic Acid is involved as an agent of tissue repair. When the skin is exposed to harmful environmental stresses like UV rays and Free Radicals, the cells in the dermis stop producing natural hyaluronic acid and the skin can no longer facilitate adequate and natural reparations.

This is why it's integral to supplement this loss with SST's SKIN LH Hyaluronic Serum. What better way to replenish the natural moisturizing agent of the skin, than with the very same substance? This results in a constant state of well-hydrated and regenerative skin.

SST's SKIN LH Hyaluronic Serum provides both a low molecular weight and high molecular weight of Hyaluronic Acid in one powerful formula.

Low Molecular Hyaluronic Acid can penetrate the epidermal layer of the skin and seep into a deeper region, were it supplements the water loss and helps restore the skin's natural cell regenerative qualities at the root level.

High Molecular Hyaluronic Acid works on the epidermal level and offers a more substantial protective purpose, hydrating and healing the protective barrier of the skin. This provides a smoother surface and softer feel, for a healthier appearance and more youthful complexion.

Hyaluronic Acid is a natural substance in the human body and plays an important role in connective tissue

Hyaluronic Acid imbibes moisture from the surrounding air to retain it in the skin

The combination of both low and high molecular weights ensure comprehensive benefits from the hyaluronic acid ingredient
